interactive dashboard pages

02 Project at a glance

INDUSTRY

Retail Analytics

DATASET

1,500 records · 25 columns · CSV

DATABASE

MySQL · reliance_retail1

TOOLS

MySQL, Power BI, Power Query, DAX

TABLE

reliance_retail_final_ 1500rows_25columns

SOURCE

Synthetic dataset prepared for this educational project

03 Problem and Objectives

CONTEXT

THE PROBLEM

Retail businesses need a clear way to review sales, profitability, customer activity, product categories and store performance.

This project uses an educational retail dataset and interactive Power BI dashboards to make that information easier to interpret.

01

Summarize sales, profit, order, customer and margin KPIs

02

Analyze monthly sales patterns across 2025

03

Compare sales by segment, category, state, channel, store type and payment

04

Explore customer types, returning customers and trends

05

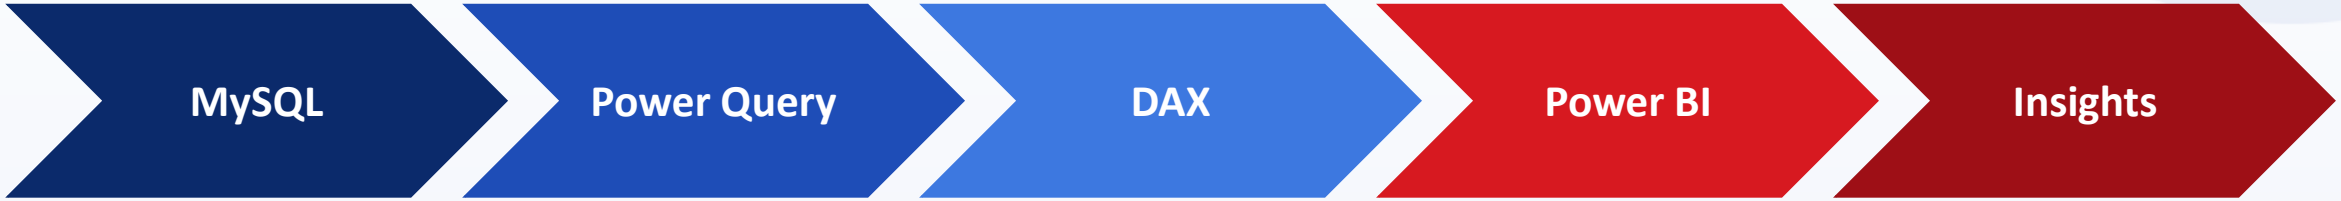

Compare store-type and product-category performance

06

Explore discount and profit patterns

04 Proposed solution

METHOD

Store and retrieve the dataset

Prepare and transform data

Calculate KPI measures

Build interactive dashboards

Explore trends and comparisons

Three report pages deliver the solution

1 Executive Sales Overview

KPIs, monthly trend, segment, category, state, channel, store type, payment method and discount vs. profit

2 Customer Analytics

Customer types, new and returning customers, top 10 customers, monthly trend and state distribution

3 Store & Product Analytics

Stores, quantity, profit, average discount, category profit and store-type performance

05

Project workflow

From idea to insight in nine steps

METHOD

1. **Industry Selection**
2. **Problem Identification**
3. **Dataset Collection**
4. **MySQL Database Setup**
5. **Data Preparation & Transformation**
6. **Power BI Preparation & Modeling**
7. **KPI Development**
8. **Dashboard Development**
9. **Insights & Recommendations**

06

Dataset: 1,500 retail records

DATA

1,500

records · 25 columns

CSV · Reliance Retail Cleaned Dataset

January–December 2025

Synthetic educational data

Identity and time	Transaction_ID · Date · Month
Store and location	Store_ID · Store_Type · State · City
Customer and product	Customer_ID · Customer_Type · Product_ID · Category · Business_Segment
Sales and channel	Quantity · Sales_Amount · Profit · Discount_Percent · Order Channel · Payment Method

07 SQL in MySQL

METHOD

```
CREATE DATABASE reliance_retail1;

USE reliance_retail1;

SELECT *
FROM reliance_retail_final_
     1500rows_25columns;
```

WHAT SQL COVERED

- Created the project database
- Selected the project database
- Retrieved all columns and records
- Loaded the table into Power BI

Advanced SQL analysis scripts were not saved as separate project files; analysis continued in Power Query and DAX.

08 Power Query and DAX measures

METHOD

Power Query

- Data preparation and transformation before modeling and dashboard development.
- Month sorting set up for chronological monthly analysis.
- State and month slicers added where shown in the report.

KPIs calculated with DAX

- Total Sales
- Total Profit
- Total Orders
- Total Customers
- Profit Margin
- Total Stores
- Total Quantity
- Average Discount

How the KPIs connect

```
Profit Margin =
Total Profit / Total Sales
```

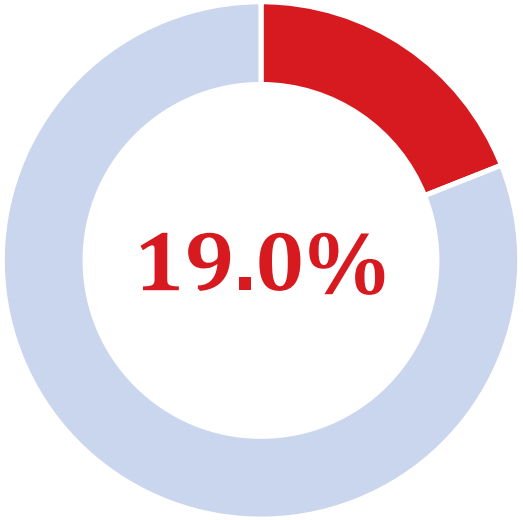

3.36M / 17.69M

= about 19.0%, matching the profit margin KPI on the Executive Sales Overview page.

09

Dashboard 1: Executive Overview

Profit as a share of total sales

Profit margin 19.0% Rest of sales 81.0%

Profit is about 19.0% of sales (3.36M of 17.69M).

17.69M
Total sales

3.36M
Total profit

~1.5K
Total orders

681
Total customers

Also on this page: monthly trend, segment, category, state, channel, store type, payment method and discount vs. profit.

Dashboard 2: Customer Analytics

TOTAL CUSTOMERS

681

customers across the dataset

New and returning customers are tracked on this page.

- **Customer type distribution**
- **New vs. returning customers**
- **Top 10 customers**
- **Customers by business segment**
- **Monthly customer trend**
- **Customers by state**

Icons show the visual type on the page, not data values.

Dashboard 3: Store & Product Analytics

TOTAL STORES

26

TOTAL QUANTITY

~3K

Also shown: total profit and average discount.

- Profit by product category
- Sales and profit by store type
- Monthly product category ranking
- Sales by store type

Compare store types and product categories on sales and profit.

Icons show the visual type on the page, not data values.

12

Key insights and recommendations

INSIGHTS

17.69M	3.36M	19.0%	681
Total sales	Total profit	Profit margin	Customers

Where to focus next

1. Confirm top segment, category and state rankings from the visuals before presenting them
2. Study discount vs. profit further: the chart shows a relationship, not a cause
3. Save SQL aggregation queries for repeatable analysis
4. Validate the approach on real retail data

Dataset note

All figures come from a synthetic educational dataset, so findings are illustrative and do not describe actual Reliance Retail performance.

26 stores · ~3K quantity

CONCLUSION · THANK YOU

Thank you

Questions and discussion are welcome

Key takeaways

01 1,500 retail records turned into KPIs and 3 interactive Power BI dashboards

02 17.69M in sales and 3.36M in profit give a 19.0% profit margin

03 Dataset is synthetic and educational, so findings are illustrative
